Spectral peaks in electric field at resonance frequencies for seismically excited motion of ions in the Earth's magnetic field

Mayu Kuriki, Masaki Matsushima, Yasuo Ogawa, and Yoshimori Honkura

Earth Planets Space, Vol. 63, pp. 503–507, doi:10.5047/eps.2011.03.010, 2011

In Fig. 4(a), the polarity of ground velocity was found to be reversed. Therefore Fig. 4 should read as follows:

Fig. 4. (a) Ground velocity record of another artificial earthquake during another blasting experiment at another site and (b) electric field record, corresponding to the ground velocity. E_x and E_y denote the northward and the eastward components of electric field, respectively. (c) Absolute values of transfer function derived from the observed ground velocity and the observed electric field.

It should be noted that the discussion and concluding remarks are not subject to correction.
